

The programming approach and the dissolution of Economics

By Franco Archibugi

Summary

Introduction

- 0.1. A question of epistemology
- 0.2. How the overturning of the approach is taking form
- 0.3. Goals and treatment of this book

Part I. The critique to the positivist logic in the social sciences

Chapter 1

How scientific are the social sciences?

(The contribution of Gunnar Myrdal)

- 1.1. The reasoning 's starting point
- 1.2. The roots of the deterministic error
- 1.3. The positive, but misleading, conclusion by Ludwig von Mises, on the praxeological approach
- 1.4. The scientific impasse of the missed praxeological approach
- 1.5. The Myrdalian comparison between natural and social sciences
- 1.6. Unresolved implications of the differences between approaches
- 1.7. Incorrect emulation of the natural sciences
- 1.8. The "explicit-making" of values
- 1.9. The scientificity in Social Sciences

Charter 2

Toward a new paradigm for the social science

- 2.1. Theories and facts
- 2.2. The "transversality" of the social sciences
- 2.3. The crucial logical point for any science
- 2.4. A "re-direction" in the "economic science"
- 2.5. Obsolete disciplinarity and the new role of the economist
- 2.6. From the inter-disciplinarity to the trans-disciplinarity: the "probleme-areas"
- 2.7. Beyond Myrdal

Chapter 3

Planning and planning theory: the difficult heritage by Ragnar Frisch

- 3.1 Econometrics and planning
 - 3.1.1. The oblivion of the "economic planning studies"
 - 3.1.2. Econometrics or "playometrics?"
 - 3.1.3. The econometrics analysis as function of planning
 - 3.1.4. Frisch's inward critique of the Western planning system.

- 3.2. A return to Frisch?
- 3.3. A general vision within which to frame the Frisch's heritage
 - 3.3.1. A better economic system against the egoistic ghost of the human nature
 - 3.3.2. Economic planning and the "free market": a useless *bagarre* in economics
- 3.4. A short excursus of Frischian scientific philosophy
 - 3.4.1. The lures of unsolvable problems
 - 3.4.2. The research of "ultimate reality" and the philosophy of chaos
- 3.5. An universal humanitarian ethics
- 3.6. An universal historic-schematic reconstruction of economics (according to Frisch)
- 3.7. Concepts quantification and reality modeling
- 3.8. The critical contribution from Wassily Leontief on the same subject
- 3.9. Towards a further Frisch's "break-trough": the end of economic theory?
- 3.10. The course of this book

Chapter 4

Basic requirements for the programming approach

- 4.1. The basic logical setting
- 4.2. Thinking in real terms rather than in monetary terms
- 4.3. The "operational" character of planning
- 4.4. The question of the "objectives" and the "strategic" nature of planning
- 4.5. The "optimality" approach
- 4.6. Other general requirements for planning
 - 4.6.1. Distinction between "selection problem" and "implementation" problem"
 - 4.6.2. Conflicts among objectives
 - 4.6.3. The qualitative assessment question
- 4.7. Other essential recommendations for a correct approach of planning
 - 4.7.1. The essential acknowledgment of the "human factor"
 - 4.7.2. The Pareto' "optimality"
- 4.8. The various phases of the planning work

Chapter 5

The "programming approach"

- 5.1. Principal characters of the Frisch's "programming approach"
- 5.2. The programming approach implications
- 5.3. The programming approach limitations
- 5.4. The programming approach in respect of the other "pre-programming" approaches
 - 5.4.1 The saving rate of growth question
 - 5.4.2. The GNP rate of growth question
 - 5.4.3. The "balanced growth" question
- 5.5. The accounting instrument to implement a programming approach
- 5.6. The steps towards a "true" programming approach

- 5.6.1. The “instrument ad hoc” approach
- 5.6.2. The “feasible instrument” approach
- 5.6.3. The “half-logic” inconsistencies
- 5.6.4. The “optimisation” approach
- 5.7. The political preference function and its instruments

Charter 6

The political preference function

- 6.1. A new cooperation between politicians and econometricians
- 6.2. The institutional and political aspects of the political preference function
- 6.3. Some dissents about the formulation of political preference function
 - 6.3.1. The approach of separation between the selection phase and the implementation phase (Frisch)
 - 6.3.2. The approach by fixed objectives (Tinbergen)
 - 6.3.3. Many “preference systems”?
- 6.4. The procedural aspects
- 6.5. The construction of the political preference function?
- 6.6. The formalization of the political preferences
- 6.7. Further steps in our analysis

Chapter 7

The programming approach impact on the socio-economic modelling

- 7.1. The quantitative modelling of phenomena
- 7.2. The impact of programming approach on the modelling
 - 7.2.1. The importance of the “decisional parameters”
 - 7.2.2. Typological catalogue from the descriptive models to the political preference formalization
- 7.3. Some further technical considerations on the selection (decisional) models
 - 7.3.1. The aggregation level
 - 7.3.2. The “pyramidation problem” in the decisional structure
 - 7.3.3. About the linearity or non-linearity in the selection models
 - 7.3.4. The variable’s choice in the selection process
 - 7.3.5. The structure of the economy and the formulation of the political preference in the decision models
- 7.4. Deterministic “relations” and deterministic “bounds” as mathematical instruments
 - 7.4.1. On the stochastic viewpoint
 - 7.4.2. On the “definitional” relations
 - 7.4.3. On the “technical” relations
 - 7.4.4. On the “behavioural” relations
- 7.5. The political equations and the bounds
 - 7.5.1. The “definitional” bounds
 - 7.5.2. The “capacity” bounds
 - 7.5.3. “External” bounds
 - 7.5.4. “Formalization” bounds

- 7.5.5. “Bluntness” bounds
- 7.5.6. Political and humanitarian bound (part of the preferences).
- 7.6. Other technical-mathematical issues for the preference function use in the decisional models
- 7.7. Using mathematical methods as instrument for “problem solving”, in selection stage at National(and Supranational, if the case) scale
- 7.8. Some conclusions

Chapter 8

The vice of “implicit theorizing” and the abuse of “statistic indirect inference” (according Wassily Leontief)

- 8.1. The neglected Leontief’s critique of “implicit theorizing”
- 8.2. The wrong logic of the “implicit theorizing”
- 8.3. The disciplinary implications of Leontief’s critique
- 8.4. The “implicit theorizing”
- 8.5. Benefits and risks about mathematics in the economics progresses
- 8.6. The poor outcome of the economic theorizing, according Leontief
- 8.7. The futile use of modelling
- 8.8. Academic responsibility in self-referencing approach and in its practice
- 8.9. For the research of a “analytical system” and a “steady flow of new data”
- 8.10. From “casual empiricism” to “the analytical system”
- 8.11. For coordinated, uniform classification system
- 8.12. Planning-and policy-centred systemic analysis

Part II. The “Planning Accounting Framework” and the new basis of policy management

Chapter 9

The “Planning Accounting Frame” (PAF) as the new instrument of the policy management

- 9.1. The PAF as “reference”: what it is?
- 9.2. The PAF and the models
 - 9.2.1. Temporal flexibility of the PAF
 - 9.2.2. The permanent monitoring (ex ante) with the actual reality (ex post)
 - 9.2.3. The necessary threshold of dis-aggregation
- 9.3. The separation problem in configuring the PAF optimal selection and the problem of implement such configuration
- 9.4. The phenomena to be included and defined quantitatively in the PAF
 - 9.4.1. The basic socio-economic phenomena of the PAF
 - 9.4.2. The numeric quantification of the economic interflows matrix
- 9.5. The investment Framework
- 9.6. Prices as implementation instruments of the PAF
- 9.7. The enlargement of the information system of the PAF to the whole of “non-economic” ambit

Chapter 10

The spatial dimension of the PAF

- 10.1. The spatial dimension of the PAF (and of the model)
- 10.2. A systemic vision of the spatial interdependences
- 10.3. The structure of the interregional flows of goods, energy and transport
- 10.4. The optimal selection of flows between centres
- 10.5. The possible simplification in terms of monetary values and the decisional model for a “single region”
- 10.6. The systemic space and the “pyramidation problem”

Chapter 11

A system of models for the PAF elaboration

- 11.1. Also “decisional” models need coordination
- 11.2. Towards the building of a system of models for planning
- 11.3. The “System of models” and alternative (future) scenarios proposed
- 11.4. The articulation of the System of models”
 - 11.4.1. The Central Model (IOM)
 - 11.4.2. The Model of Technology
 - 11.4.3. The Import-Export Model (IM-EX)
 - 11.4.5. The primary production Factors Models
 - 11.4.6. Final demand and social indicators
 - 11.4.7. Regional and institutional articulation
 - 11.4.8. Optimisation and sub-optimisation (Mobile and fixed objectives)
 - 11.4.9. The Labour supply Model
 - 11.4.10. The Territory and Environment Model (TEM)
 - 11.4.11. Final use *versus* primary availability
- 11.5. The utilization of the System of Model and their quantification
 - 11.5.1. The utilizations of “Transitional Tables”
 - 11.5.2. The building and the Utilization/Quantification of models of final resources
 - 11.5.3. The evolution of the socio-demographic factors
 - 11.5.4. The evaluation of the territory (or environment) supply.
 - 11.5.5. The evaluation of the labour-supply
- 11.6. Various iterations in the utilization of models
- 11.7. General characteristics and limits of the described system of models
 - 11.7.1. The relative prices system
 - 11.7.2. The income distribution system
 - 11.7.3. The financial flows system
- 11.8. Further limits and warnings about the PAF

Chapter 12

The political and practical use of the PAF

- 12.1. The practical use of the PAF
- 12.2. On the computation problems of the PAF optimal solution
- 12.3. The programming approach and the traditional “economic policy” approach

- 12.4. Implementation and continuity problems in the planning process
- 12.5. The phases in the building the PAF and the Planning documents
 - 12.5.1. General advertising and the principal organisation
 - 12.5.2. The projects gathering
 - 12.5.3. The “technical description sheets”
 - 12.5.4. The “planning chart”
 - 12.5.5. Higher level aims
 - 12.5.6. The basic equations and the optimal solution
- 12.6. Critical analysis of the PAF
- 12.7. Institutional procedures (government, parliament and normative performances)
- 12.8. Planning and its details
- 12.9. The PAF “implementation”
- 12.10. Some conclusions on the PAF

Part III.

Some past courses towards the programming approach

Chapter 13. Von Mises’s praxeological approach and its contradictions

- 13.1. A unitary revival of social science as science of the human action.
- 13.2. The epistemological meaning of praxeology
- 13.3. The depletion of praxeology within of individualism
- 13.4. Voluntarism and human perspective
- 13.5. A plural dimension of the praxeology.

Chapter 14. The programming approach, as futuristic decision and utopia

- 14.1. The logical foundations of the decisional model
- 14.2. Forecasting and programming
- 14.3. Economics, programming and utopia
 - 14.3.1. Economic theory as utopia. (Bruno de Finetti)
 - 14.3.2. The economic theory as “utopian” fiction (Daniel Bell).
 - 14.3.3. An operational “realism” as way out from the “impasse”
- 14.4. The decisional use of descriptive models
 - 14.4.1. The ambiguities of the dichotomy: “descriptive” and “normative approach
 - 14.4.2. Again on the illogicalness of the "realistic" validity of behavioural projection
 - 14.4.3. Conclusions: “prescriptive” approach and “programming” approach have common pragmatic bases

Chapter 15. The decision-centered analysis

- 15.1. Programming and the knowledge/action nexus
 - 15.1.1. “Positive” knowledge and “programming” knowledge
 - 15.1.2. The damages of the “positivist” approach
- 15.2. The unsuspected but significant contribution of the “urban and physical planning”
 - 15.2.1. The vision of the planning analysis as decision-centered (by Andreas Faludi)

- 15.3. A re-statement of postulates of the programming approach
 - 15.3.1 Postulate n.1 in the planning analysis: “planning is based on a action-oriented analysis and never on a data-analysis”
 - 15.3.2. Its basic Corollary: “the theory of planning starts always from the ex ante analysis and never from ex-post analysis”

Chapter 16. The programming approach and the economic “general theory”

- 16.1. Isard’s general theory
 - 16.1.1. In search of more ‘realism’
 - 16.1.2. The relaxation of assumptions and the multiplication of cases
 - 16.1.3. The extension of the objective-function to “non economic commodities”
- 16.2. The General Theory and the Accounting Frame for Decision-Making Processes
- 16.3. The general theory at midway between a still positivist approach and the programming approach

Chapter 17. The programming approach and “bounded rationality”

- 17.1. Programming approach and administrative sciences
 - 17.1.1 Management Sciences as context
 - 17.1.2. Organisational science as a result-science
- 17. 2. About the “cultural origins” of strategic planning in the public sector
 - 17.2.1. The role of the systemic approach
 - 17.2.2. Management sciences between rationality and romanticism
- 17.3. Political and administrative sciences and the “bounded rationality” concept
 - 17.3.1. Imprecision and relativity of the “bounded rationality” concept
 - 17.3.2. The concept of bounded rationality in the specific case of the programming approach
 - 17.3.3. The optimisation principle and the programming approach
- 17.4. Political and administrative sciences and strategic planning

Chapter 18. Conclusive considerations: the programming approach and the dissolution of “economics”

- 18.1. Economics and “non-economic theories and facts?”
- 18.2. Rationality *ex post* versus rationality *ex ante*
- 18.3. Which future for the economics?
- 18.4. A science integrated to the action: the Planology
- 18.5. Social or collective bargaining as necessary tool of the functionality of the programming approach
- 18.6. The renewal of social organization and of the social policy
- 18.7. From absolute values to evolutionary values
- 18.8. The “political preference” (i.e. collective preference) as indispensable for the mankind freedom
- 18.9. A post-economicist perspective
- 18.10. Beyond this book

- Appendix 1: Note on the concept of “determinism” and “positivism”
- Appendix 2: Memoir on the personal relations with some economists which had an important role in the maturation of the basic thesis of this book
